This response is due by September 21, 2003. Thank you for the time extension.

Trust that you have now received the samples which illustrate the invention. The samples did not include the changes in dome configuration or positioning to prevent renesting of disoriented plied up sheets.

The following claims are derived from the actual text in the application without further embellishments.

References to location of the wording will be gladly supplied.

There is still time for revisions before late filing fees accrue if you care to comment.

(The following comments have no relevance whatever to this invention, but may be of interest. Recently celebrated my 79th birthday and 53rd wedding anniversary after numerous operations. Am still active as a volunteer SCORE counselor, affiliated with the US Small Business Admin. Recently wrote a well selling business book free for SCORE. In my time came up with prior inventions which became societal successes and added to US industrial prestige. US Pat. 3,286,305 and following ones covered continuous corrugated hose - now seen as blue oxygen hose in hospitals and corrugated drainage pipes of many sizes. US 3,767,520 started the liquid ink pen industry. US 4,867,485, kink impeding garden hose, can now be seen in most hardware stores. There were others, including some failures. All were assigned and paid for by companies and no royalties were collected. This late after retirement invention is my own property and expense.)

Thank you. Respectfully,

Peter. H. Seckel.
